Metal rings with castings

Instructions No. 2879

Difficulty: Beginner

Working time: 2 Hours

Metal rings and **moulding with casting** compound are absolutely in. We combine both trends and create beautifully designed metal rings for hanging with a designed surface made of **wooden blocks** and self-cast figures. Together with a lettering and an illumination by a chain of lights, we have created two beautiful decoration pendants - perfect for your walls, too.

This is how you design the rings:

First, two **blocks** are glued to the metal ring with **VBS handicraft glue** to the **metal ring**. The blocks are glued to the large ring with the narrow side so that a wide surface is created. On the small ring, the wooden blocks are glued on with the wide side, creating a smaller surface area, but allowing the front block to be labeled. You can print out our **free template** and transfer it to the block using graphite paper. Trace the lettering with the Posca marker .

Allow the glued blocks to dry for approx. 3 hours.

Mix the **Raysin** according to the package instructions at mixing cup , pour it into the molds and tap the mold lightly on the table surface so that the air bubbles come out. After 1 hour Time to dry: , the casts can be carefully removed from the mold. Smooth the edges with a little sandpaper .

Attach the back of the light houses **chain of light** with hot glue. Then place the houses in the ring (fix with glue if desired).

Glue the "reindeer friends" to the blocks with hot glue.

Finally, attach **the ribbons**.
