## Papercut Karte

## Instructions No. 2404

. Difficulty: Beginner
© Working time: 1 hour 30 Minutes

Sending or presenting a card is always something very personal. This card not only comes up trumps with a great 3D effect, but also catches the eye with its papercut elements. Designing this card is not difficult at all. With our free template you can easily create this leaf card.

## This is how the card is made:

Print out the templates and transfer them to the corresponding papers. We have chosen a combination of pink, purple and green here. However, you can choose and use the papers according to your taste.

Cut out the motifs with the cutter and trim the leaves so that they are not completely cut out. Leave the lower part of the leaves closed. Now you can fold the leaves up a little on the sides for a great 3D effect.

The green paper was glued with double-sided adhesive tape, the other two papers with 3D adhesive pads. This creates an additional beautiful 3D effect.

Glue the beads with craft glue.

## Article information:

| Article number | Article name | Qty |
| :--- | :--- | :--- |
